

Action List

13 actions in build order · 25 Sept 2026 · Test grading on the Galaxy Tab S10 Ultra and report sending on an iPhone

PHASE 1 Fix what's broken

- ☐ **1 Make analytics numbers correct**
 - “A/A* this month” and “Needs support” must count students, not results. Today it says 25 students when only 17 are enrolled.
 - July tests show 0 results on Analytics even though they were marked. Include them. The grade chart should cover all 151 submissions (it shows 102).
 - Completion % should compare submissions against only the students a test was set for (this also fixes the same wrong % on the student's own Progress page).
 - A test with scripts still waiting to be marked should say “2 to mark”, not an average of 0%.
 - “Full syllabus” and “Full Syllabus” show as two topics; treat them as one. Keep Business “Unit 5” and Economics “Unit 5” apart by saving the subject and level with each topic.
- ☐ **2 Fix annotation with the S Pen**
 - Pressing the S Pen button opens the browser menu. Stop that menu appearing on the script, and make the button switch to the eraser instead.
 - Lines break or stop mid-stroke. Keep the pen locked to the drawing until it lifts (`setPointerCapture`), draw with the pen only, ignore the hand resting on the screen, and stop the browser cancelling a stroke by mistaking it for a scroll (`pointercancel`).
 - Fingers should still scroll and zoom the script while the pen draws.
 - Add a blank strip on the right of each page so marks written at the edge aren't cut off.
- ☐ **3 Make notes view-only**
 - Students read notes inside the portal (e.g. the PDF.js viewer) with no download button — remove it on both the admin and student side.
 - The file link works for a few minutes only (a “signed URL”), so it can't be copied and shared.
- ☐ **4 Fix test notifications**
 - Every time a test is edited, students get 2–3 separate alerts — “New test: 'Untitled test'” and “Test updated”, sometimes repeated. The name shown is wrong and the flood is confusing.
 - One clear notification per real change, using the test's actual name.
- ☐ **5 Show correct answers on wrong questions**
 - On a multiple-choice result, a wrong answer only shows “Your pick”. The student never sees which option was correct, so they can't learn from the mistake.
 - Highlight the correct option alongside the student's pick.

PHASE 2 Students and attendance

- ☐ **6 Phone numbers and profile photo**
 - Add student and parent phone numbers, saved with the country code (e.g. 92 300 1234567). Each has a button that opens a WhatsApp chat with that number.
 - Students can upload a profile photo. Crop it to a square and shrink it to 512 × 512 px so pages stay fast.

- ☐ **7 Attendance (two ways, use either)**
 - **Daily:** open a class and choose the date. Every student starts as Present; tap a name to switch to Late or Absent.
 - **Monthly:** type one attendance % per student at month end. If daily attendance was taken, the % fills in automatically and can still be changed.
 - The % shows on the student profile, the monthly report and Analytics.

PHASE 3 Reports and WhatsApp

- ☐ **8 Monthly PDF report**
 - One page per student: attendance %, tests taken out of tests set (missed tests named), average and grade per subject, progress through the month, strongest and weakest topics, a teacher comment and the Hamza Teaches logo.
 - Created automatically on the 1st of each month for every active student. Admin can edit the comment before sending.
- ☐ **9 Professional report link + one-tap send**
 - Each report gets a short private link like `hamzateaches.com/reports/k7Qx9mP2aL`. It opens a branded page showing the report, with a Download PDF button. No login needed.
 - In WhatsApp the link shows a preview card with the logo and “Monthly Progress Report · student name”. Links stop working after 90 days.
 - The Send button opens WhatsApp straight on the parent's chat with the message and link already typed; admin just presses Send. Works on iPhone, Mac and the tablet.
 - A “Send monthly reports” button goes through students one by one. After each send, coming back to the portal asks “Sent?” and moves to the next student.
- ☐ **10 Reminders panel**
 - A list on the admin home screen that fills itself: students who missed a test, students absent 2 or more classes in a row, and monthly reports to send on the 1st.
 - Each row has a Send button that opens the parent's WhatsApp with the message ready. Sent reminders are recorded with the date, so the same parent isn't messaged twice.
 - New reminder types and message wording can be added later from settings, without rebuilding the panel.

PHASE 4 Save time every week

- ☐ **11 Faster grading**
 - A “mark” tool in the annotator: write a number in the margin next to each answer, and the numbers add up into the total automatically (the total can still be edited). This stops wrong totals being typed in.
 - Tick and cross stamps: one tap places a ✓ or ✗.
- ☐ **12 Batch edit**
 - Tick several items in a list and change them all at once. For example: change the close date of 6 tests, release 10 marked submissions, assign 5 notes to AS Economics, move 4 students to another class.
- ☐ **13 Enable/disable cohort**
 - Switch off a finished cohort: its students can't log in, and it disappears from filters and analytics. Nothing is deleted, and it can be switched back on.
