

Hamza Teaches Portal Changes

Everything to change, in one place. No em dashes anywhere in the UI.

1. Grade boundaries

One grade function everywhere: results, progress, analytics, and the report.

- A*: 92 and above
- A: 85 to 91
- B: 75 to 84
- C: 65 to 74
- D: 60 to 64
- E: 50 to 59
- U: below 50

A 100 percent result must show A*.

2. Logo

Remove the icon completely, everywhere: sidebar, login lockup, page headers, favicon, and the PDF. Keep only the words "Hamza Teaches" as text. No mark at all.

3. Analytics

Two views, the class overview for the teacher and the individual student. Both lead with scores and improvement. Topics come second. Add a month filter alongside the existing cohort filter.

Class view (teacher)

- Class average, both overall and for the selected month.

- Average trend month over month, as a line.
- Grade distribution across A* to U, using the bands above.
- Per test: average score, number of submissions, and completion percentage.
- Most improved students this month, biggest rise versus last month first.
- Students slipping, anyone on a downward trend, so they can be caught early.
- Weak topics across the class, ranked worst first, so you know what to reteach.
- Completion rate per cohort, who is actually sitting the tests set.

Student view

- Headline: average this month, current grade, and change versus last month, with an up or down arrow and the point difference.
- Score trend across every released test, in order taken.
- Per test list: test name, subject, score, grade, and date.
- Topic mastery: every topic with a percentage, ranked, strongest and weakest marked.
- Completion: tests sat versus tests set.

Priority order on every screen: score and improvement first, then grade, then topics, then completion.

Fixes that affect analytics

- Apply the grade bands above here too.
- Score trend with a single result currently draws a triangle from zero. With fewer than two points, show only the dot, no area fill.

4. Monthly report (PDF, manual export)

One report per student for a chosen month. Exported as a PDF in a light skin, cream or white background with gold accents and dark text, so it reads and prints well on a phone. The teacher downloads it and sends it to parents manually. No WhatsApp integration and no stored numbers.

What it shows, in priority order:

1. Header: student name, the month, and "Hamza Teaches".

2. **Headline:** average this month, grade, and the change versus last month, with direction. This is the most important block.
3. **Score trend:** a line of the month's results, with the previous month or two for context.
4. **Test breakdown:** a table of every test that month, with subject, score, grade, and date.
5. **Topic mastery:** strongest and weakest topics, and the one to work on.
6. **Completion:** tests sat versus tests set that month.
7. **A note from the teacher:** a short free text line Hamza writes for that student.

Scores and improvement lead. Topics and completion follow.

5. Copy

Playful, warm, and human. Speak to one student. Never corny, never hype, parent safe. One line per slot.

Login

- Helper: "Locked out? Your teacher has the key."

Dashboard

- Greeting, time aware: "Morning, {name}.", "Afternoon, {name}.", "Evening, {name}."
- Open tests section: "YOUR MOVE"
- Past results section: "DONE & DUSTED"
- Resume banner: "You left a test running. Jump back in?"
- Stat tiles: "TESTS DONE", "YOUR AVERAGE", "PERSONAL BEST"

Empty states

- No open tests: "Nothing to sit right now. Enjoy the quiet."
- No past results: "Nothing here yet. Sit a test and watch this fill up."
- Results pending: "Your teacher is marking. Try not to refresh."
- No announcements: "All quiet. No news from your teacher."
- No resources: "Your teacher has not dropped anything here yet."
- No progress: "Sit a test and your progress starts here."

Take test

- MCQ helper: "One answer only."
- Written placeholder: "Show your thinking here."
- Photo prompt: "Snap your working and upload it."
- Buttons: "Previous", "Submit & Next", final "Hand it in"
- 5 minutes left: "5 minutes left. No need to panic."
- 1 minute left: "60 seconds. Wrap it up."
- Auto submit: "Time is up. We handed it in for you."

Submitted

- Heading: "That's in."
- Body: "Your answers are in. Your teacher takes it from here."
- Button: "Back to dashboard"

Results (kept factual, parent safe)

- Wrong answer label: "Not quite"

Progress

- Subhead: "Based on {n} result so far.", pluralise result when more than one
- Topic labels: "Locked in", "Getting there", "Shaky", "Needs work"
- Weak topic nudge: "Start your next revision here."

Notes

- Subhead: "Things your teacher wants you to have."

System

- Loading: "One sec..."
- Login error: "That did not work. Check your username and password."
- Generic error: "Something tripped. Try again."
